

NEUROPSYCHOLOGY
PARTNERS

MEDIA BIO & ONE-SHEET

ALFRED MANSOUR, PhD, LP

CLINICAL NEUROPSYCHOLOGIST • NEUROSCIENTIST • FOUNDER,
NEUROPSYCHOLOGY PARTNERS

Available for radio, television, podcast, print and digital interviews • Live or recorded • Phone, Zoom or in-studio when appropriate

MEDIA PROFILE

Dr. Alfred Mansour is a clinical neuropsychologist and neuroscientist whose career spans decades of research and clinical service. As founder of Neuropsychology Partners (NPP), he works with patients and families facing memory and cognitive change, dementia, ADHD, concussion and traumatic brain injury, and other neurological and psychological concerns. His media strength is translating complex brain and behavioral science into clear, practical information for general audiences.

AREAS OF EXPERTISE

- ADHD and attention concerns
- Memory loss, MCI, dementia and Alzheimer's disease
- Healthy aging and cognitive change
- Concussion and traumatic brain injury
- Neuropsychological testing and diagnosis
- Brain health, cognition and neuroscience

MEDIA VALUE

- Clear explanations without unnecessary medical jargon
- Practical takeaways for patients and families
- Timely expert commentary on brain-health stories
- Clinician-scientist perspective grounded in research and practice
- Prior radio/media experience, including WJR HealthWatch
- Michigan-based expert for local and regional media

BACKGROUND HIGHLIGHTS

- Research background at the University of Michigan's Mental Health Research Institute, with work spanning neuroscience, neuroanatomy, learning and memory, and neuropsychopharmacology.
- PhD in Biopsychology from the University of Michigan and PhD in Clinical Psychology from Eastern Michigan University; fully licensed psychologist in Michigan.
- Published broadly in scientific journals, including Trends in Neurosciences, Journal of Neuroscience, Brain Research, Journal of Pharmacology and Experimental Therapeutics, and Proceedings of the National Academy of Sciences.
- Clinical experience includes neuropsychological assessment involving memory disorders and dementia, concussion/TBI, ADHD, and other neurological and cognitive conditions.

SUGGESTED INTERVIEW TOPICS

- **Is It Really ADHD? Why Accurate Diagnosis Matters**
- **What Families Should Know About Dementia Testing**
- **Can Brain Imaging Replace Neuropsychological Testing?**
- **The Changing Landscape of Alzheimer's Detection and Treatment**
- **Normal Aging or Something More? When Memory Changes Deserve Evaluation**
- **Concussions: When Is Neuropsychological Testing Needed?**
- **Why Memory Problems Don't Always Mean Dementia**
- **Everyday Brain Health: Sleep, Exercise, Social Connection and Cognition**
